

Titanic - EDA

Exploratory Data Analysis of the Titanic disaster dataset

Requirements :-

Python 3.x, Jupyter Notebook, Numpy, Pandas, Matplotlib, Seaborn

The notebook is also added with comments for its major steps for better understanding of the process.

Major insights extracted:

1. Females were given higher priority in the rescue operation than male.
2. The first class people were given higher priority than the second class than the third class.
3. The features such as Age , Siblings , Onboard didn't have major influence on the survival probability.
4. A better way for filling missing values for Age column is explained by Extracting info from Name column.
